- R3F
- Performance Optimization
- Software Testing
- SE Optimization
- Progressive Enhancement
- Accessibility auditing
- Build Automation
- Responsive Web Design
- UX Design/Strategy

Benjamin Anoruo

Expert FullStack Developer

Engineer valued for driving high-performance accessible web experiences. I design quality, user-friendly and scalable products regardless of stack.

Experience

I've worked on a handful of web projects over the years, some of which were for the following organizations:

Spencerzill Studio

Fullstack Developer

2021 – present

Identified a gap in my team's deployment workflow and built a solution that reduced the time required for each deployment from over 40 minutes to less than 6 minutes, which restores almost 300 hours of developer productivity every year

Collaborating with UX designers and researchers to inform the direction of products we craft.

Designed and implemented a cross-browser, IE 11 compatible marketing site for the product.

Roqqu

Frontend Developer

2023 - 2024

Built frontend applications for multiple clients. Most especially JavaScript and React applications.

Rebuilt the company's marketing site initially written in HTML/CSS using React and Gatsby.

Crafted, audited and improved design, accessibility and overall experience of products.

Enforced healthy codebases, coding style and standards. Completed projects on time and delivered to clients accordingly.

RavenBank

Frontend Developer

2022 – 2023

Crafted a scalable component library that enforced accessibility and fluency across the application.

Built a multi-role user authentication system from the ground up with JavaScript.

Implemented a client-side localization system for the entire app. Built a client-side multilingual routing system with solid navigation guards.

Engineered fail-safe optimized utility libraries to minimize runtime errors and unusability in production.
